Product specifications

Technical parameters	Technical configuration
	• Drawer • Panel • Meal board • Towel rack • Selective color
Size: 470 × 470 × 750 mm	• Available in ABS or PP material

Product details

Material

The overall product is made of high-quality PP brand-new pure engineering plastic injection molding, with a plate thickness of 3 mm, sturdy, durable, non-deformable, corrosion-resistant, aesthetically pleasing, and easy to clean.

Deck plate

The top of the PP material on the countertop adopts a concave design to prevent items from falling off.

Cabinet

Composed of three parts. The first layer features a movable suction board and a pressure groove for placing a water cup, thermometer, and sliding drawer. The upper open cabinet door, with adjustable partition and storage box inside, offers large capacity. Cannot hold hot water bottles.

Handle

The embedded door handle will not cause collision, and the U-shaped design of the upper handle makes it easy to push and pull. Soft opening and closing; quiet and smooth.

Towel rack

There are foldable towel racks on both sides, which can be extended when needed or hung to hold other items, with an angle range of 90 degrees.

Colour

Available colors include blue, white, green, brown, and more.
