Gynecological Examining Table

MT-OEB04(DST-5B)

Applicable scene

- General outpatient clinic,basic examinations in internal medicine/surgery.
- Routine gynecological examinations,prenatal follow-up.
- Community health center,private clinic,health examination center.
- Specialized clinics such as dermatology,general surgery,etc.

Additional advantages

- The bed surface is designed without sharp corners,and the edges are rounded to prevent bumps and injuries.
- The drawer handles are anti-slip and easy to hold,even with gloves on,allowing for smooth pulling.
- The overall structure is compact,not occupying too much space in the clinic room,and is suitable for the layout of small and medium-sized clinics.

The classic American-style manual examination bed is an ideal choice for primary clinics,general consultation rooms and gynecological examination scenarios.It combines clinical practicability,patient comfort and ease of operation for medical staff.

Key design features

Ergonomic bed body and comfort experience

- The bed surface is equipped with a high-resilience,antibacterial and easy-to-clean blue vinyl soft pad.It is water-resistant and stain-resistant,making cleaning and disinfection convenient. At the same time,it can provide soft support for patients,alleviating fatigue caused by long-term examinations.
- The backrest is supported by an air spring for manual adjustment.It can be easily raised or lowered,meeting the needs of different inspection positions.The operation is effortless and quiet.
- At the foot of the bed,there are anti-slip steps,which facilitate the movement of patients with mobility issues when getting in and out of bed,thereby enhancing the safety of the medical visit.

Large-capacity,two-sided storage system

- On both sides of the bed,multiple sets of drawers are provided,allowing for bidirectional access from either side. Medical staff can quickly retrieve equipment and consumables from any of the sides,optimizing the workflow in the examination room.
- The product adopts an integrated seamless design,preventing spills from remaining.It makes daily cleaning much easier and reduces the risk of cross-infection.

Sturdy and durable American craftsmanship

- The bed body is made of high-strength engineering plastic and a metal frame structure,with excellent load-bearing performance, which can meet the long-term and frequent clinical usage requirements.
- The overall design is of a fixed height,and the bed surface height is suitable for the operation habits of most medical staff,reducing the occupational strain caused by frequent bending.

Gynecological Bed Introduction
